

Welcome to the D.C. AI Hackathon

TODAY'S AGENDA

- 9:00 AM – Check-in, setup, & team formation (max 4)
- 9:35 AM – 10:00 AM – Kickoff + challenge reveal
- 10:00 AM – 3:00 PM – Build (lunch 1-2 PM, mentors available)
- 3:00 PM – Submissions due (DevPost)
- 3:00 PM – 5:00 PM – Judging, finalist pitches (8), awards

ACTION ITEMS (BY 9:30AM)

- ✓ Completed full Discord onboarding in #onboarding
- ✓ Formed a team (max 4)

Washington, D.C.

ElevenLabs deepinfra

svb Silicon Valley Bank

The Challenge: Not Just Chat

Create an AI workflow that autonomously plans and executes real tasks:

1. Converts a user goal into an actionable plan
2. Sequentially runs up to 10 tool or API actions
 - E.g. transformations/analysis, file creation/modification, code generation and execution, simple API calls
3. Persists and updates memory throughout execution
4. Outputs real results in a simple, demo-friendly UI

TL;DR: goal → plan → tool usage → memory → output

Requirements

YOU DO NOT NEED

- A full-blown agent framework
- Complex memory systems
- Perfect planning
- Highly complex multi-API orchestration.

YOU DO NEED

- A functional mini-system
- Maximum of 10 execution steps per workflow
- **Something ready to be demoed live**

Prizes

Grand Prizes

1st Place

- \$1K cash
- \$300 Cursor credits + 3mo Eleven Labs Pro (\$99/mo) for each team member
- 100M DeepInfra inference tokens

2nd Place

- \$750 cash
- \$300 Cursor credits per team member

3rd Place

- \$250 cash
- \$300 Cursor credits per team member

Special Awards

Best ElevenLabs Project

Each team member
receives 6 months of Scale
tier (\$330/month)

Best UI/UX built with 1 v0 prompt

\$100 v0 credit to winners
each

Founder's Pick

/q99 Interview + \$500

Remember to opt-in to these on DevPost

Host Challenges

Best Finance Project

\$250 to winners

Best Growth Engine

\$250 to the best AI agent that automates product growth and distribution without getting caught.

Remember to opt-in to these on DevPost

Team & Event Rules

- All teams must use MiniMax via Cursor
- Teams can have up to 4 members
- Projects must be built during the event (we're checking)
- Projects must be original
- Submissions due on DevPost at 3PM
- Respect the venue & participants.
- Judges' decisions are final

What to Submit by 3PM >>

- GitHub repo link (public)
- Demo link
- Recorded demo video (3 min max)
- 2-3 sentence description & track(s)
 - If entering the MiniMax track: post project on a public LinkedIn/X with @MiniMax
#DCCursorMiniMaxHackathon

SUBMIT TO DEVPOST HERE

How to Win

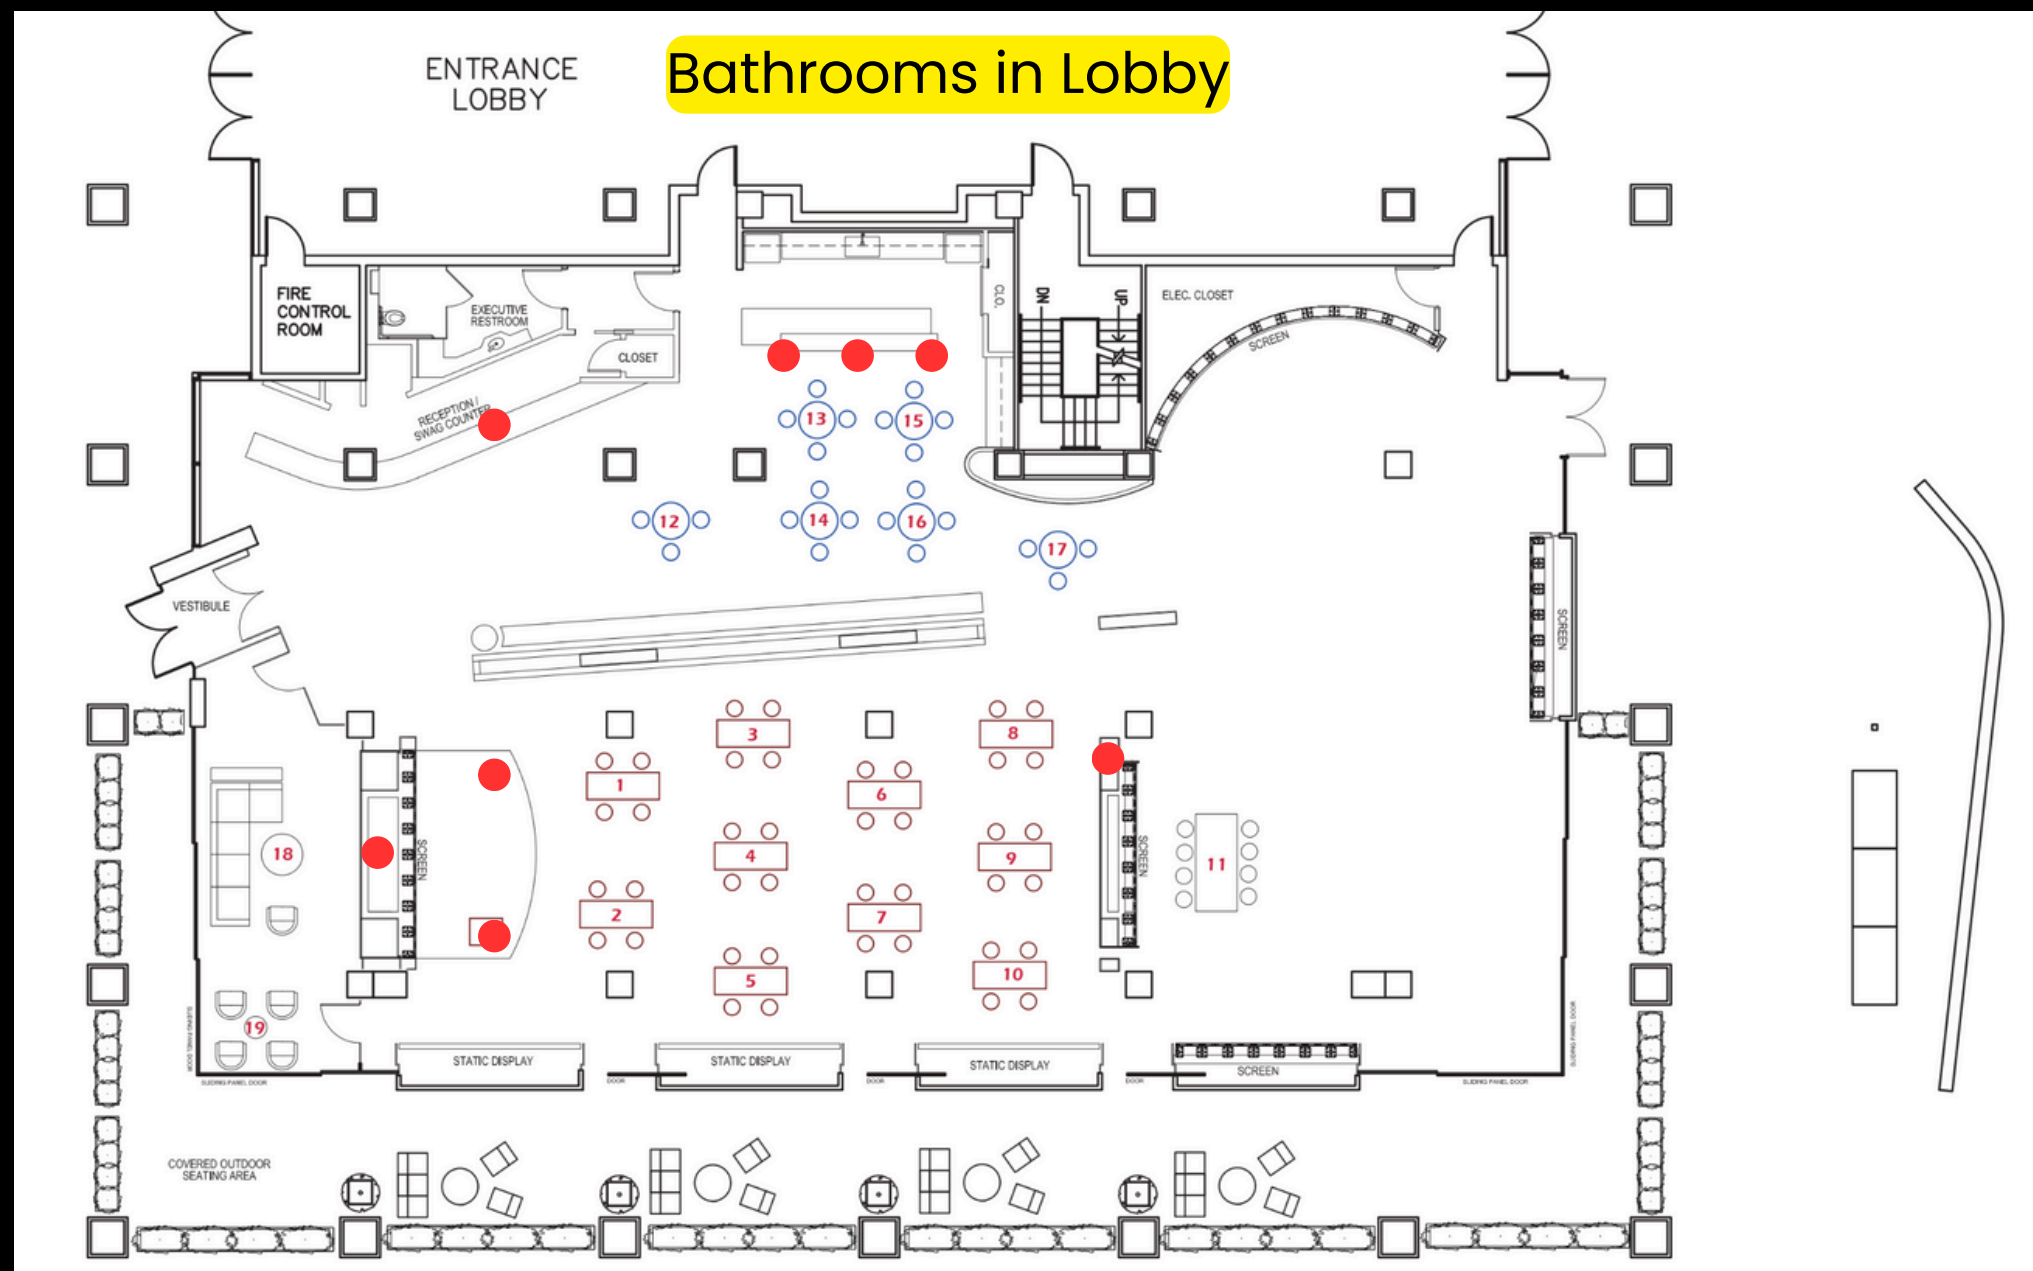

The Path to Victory

- 3:00 PM: Submissions close on DevPost
- Top 8 finalists selected to pitch live
- 4-minute pitch: 2 min demo + 1 min explanation + 1 min Q&A
- 3 Grand Prize Winners crowned from finalists
- Final results confirmed after code review

What Judges Score

- 40% Technical Execution: Does it work? Real tools, not just chat
- 25% Impact: Would real users want this?
- 15% Creativity: Fresh ideas, no ChatGPT wrappers
- 10% UX/UI: Clean, demoable interface
- 10% Pitch Quality: Clear explanation in up to 3 minutes

Things to Know

Power outlets ●

- Wifi is **JBG SMITH_Guest** (no password)
- We will keep you fed, hydrated, & energized
 - Panera (breakfast), Pizza (lunch), Water, sparkling water, snacks, Red Bulls
- Outlets/seating here is limited
 - Alternatives: Tatte's, Starbucks

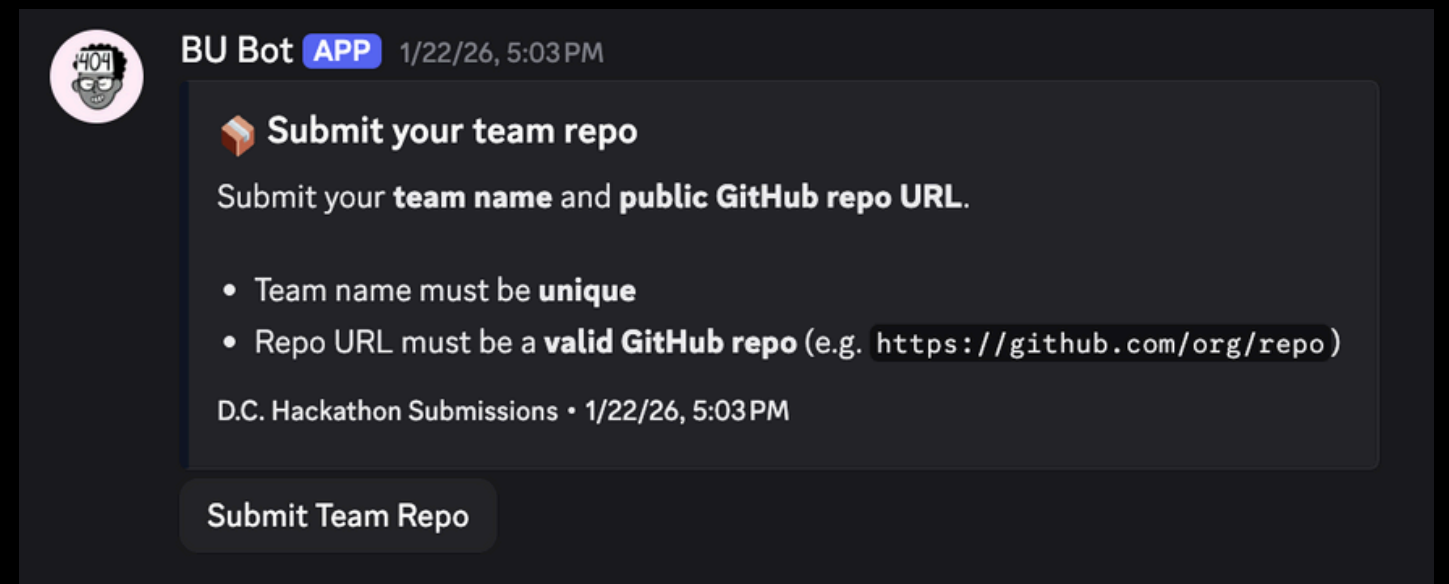

LET'S GET
HACKING!

What To Do Next

- Create team's **PUBLIC** Github repo
- Go to #kickoff channel on Discord
- Submit your team name and repo URL
- Setup instructions for MiniMax & Cursor are also in the channel

Slides will be sent in Discord

I SPILLED MY COFFEE
ON MY COMPUTER!!!

EXAMPLE

Goal: Generate a plausible excuse for being late.

Workflow:

1. Input: User enters context (audience, tone, optional constraints). Memory stores past excuses.
2. Plan (AI): Break goal into steps:
 - Step 1: Identify situation (who/what they're late for)
 - Step 2: Generate candidate excuses
 - Step 3: Rank by plausibility
 - Step 4: Select top excuses
3. Generate: Cursor/MiniMax creates 5-10 plausible excuses following the plan.
4. Score: Plausibility API ranks excuses.
5. Video (AI): AI video generator (e.g., Runway/Gen-2) produces a short clip illustrating the top excuse (e.g., traffic jam, spilled coffee).
6. Output UI: Display top 3 excuses with videos and copy/share buttons.

Submissions
due at 3 PM
